

APARNA GARG

Full Stack MERN Developer

 +91 6280069275 |  aparnagarg2005@gmail.com
 linkedin.com/in/aparna-garg-/ |  github.com/AparnaGarg248

SUMMARY

Computer Science (BE) undergraduate with a strong foundation in data structures, algorithms, and object-oriented programming, plus hands-on experience building full-stack and embedded systems projects end to end — including a production-style MERN marketplace platform with voice-driven UX. Applies machine learning and data analysis (Python, Pandas, Scikit-learn) to real-world problems, with a focus on financial fraud detection and fintech applications. Seeking a Software Engineering Internship to write production-quality code, learn large-scale system design, and contribute to high-impact engineering teams.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C/C++ (Embedded)

Core CS: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Computer Networks

Web & Backend: React.js, Node.js, Express.js, MongoDB, Mongoose, REST APIs, JWT Authentication, Tailwind CSS

Data & ML: Pandas, NumPy, Scikit-learn, Predictive Analytics

Databases: SQL, MySQL, MongoDB

Tools & Platforms: Git, VS Code, Jupyter Notebook, Arduino IDE, Vercel

SOFT SKILLS

Analytical & Critical Thinking, Self-Directed Learning, Attention to Detail, Effective Communication, Time Management, Collaborative Problem-Solving, Agile

PROJECTS

SkillBridge — Voice-Activated “Uber for Skilled Labor” SaaS Platform

React.js, Node.js, Express.js, MongoDB, Mongoose, Web Speech API, Tailwind CSS, JWT Auth

- Built a two-sided booking marketplace with dynamic status tracking and contact masking that reveals user info only after mutual job acceptance.
- Integrated a hands-free skill-discovery engine using the Web Speech API with debounced React hooks to cut redundant API calls.
- Implemented real-time worker ratings via an async aggregation pipeline, with passwordless OTP auth and JWT-based RBAC.

LPG Gas Detection and Prevention System

Arduino Uno, C/C++, Gas Sensors, Embedded Systems

- Designed an embedded safety system on Arduino Uno that monitors gas concentration and triggers automated alerts on leak detection.
- Built and debugged the sensor-actuator circuit, integrating gas sensors with threshold-based control logic to activate ventilation.
- Engineered low-latency detection-to-response logic to reduce fire-hazard risk.

RESEARCH INTERESTS

Financial Fraud Detection • AI in Finance • Predictive Analytics • Fairness in ML-Based Credit Scoring

ACHIEVEMENTS & ACTIVITIES

- Maintain a consistent algorithmic problem-solving practice to strengthen data structures and algorithms proficiency.
- Actively researching applications of AI and predictive analytics in fintech and fraud-detection systems.
- Strong academic standing across core computer science coursework, including DSA, DBMS, Computer Networks, ML, and AI.

EDUCATION

Chitkara University, Himachal Pradesh, India

2024 – 2028

Bachelor of Engineering (BE), Computer Science

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Computer Networks, Machine Learning, Artificial Intelligence
